

## INDIVIDUAL MEMBER READINESS REPORT

This report was automatically generated by the USNR Admin Automation Project.

- Source Code: <https://bitbucket.org/usnr/usnr-admin-automation> (access restricted)
- Groovy-Java based JNLP Application to allow remote installation on any machine with Java.
- This program and its source contain no member information, and the source is tested against fake people.
- This program is executed on the local machine, where member data must be supplied.
- This automates the combining and analysis of several Navy system spreadsheets locally.

The purpose of this project is to automatically generate member level action items and unit summary reports by combining information from the following systems and reports:

NRRM: Smart RUAD Report	NRRM: Individual Medical Readiness Report
FLTMPS: GMT Report	FLTMPS: IA Report
FLTMPS: e-Learning Report	Spreadsheet containing manual AT, security, and account inputs

### GENERATED WARNINGS

Since these reports do not contain a method for guaranteed unique member identification, summary data can only be retrieved for members that can be uniquely identified by name and rank. It is also possible for members to be present in the RUAD but not show up in other systems for a unit. This can result in members that will have incomplete information in the report.

**INDIVIDUAL MEMBER READINESS REPORT - DEC 25 2014**

LCDR BRAVO ALPHA

FOLD TO THIS LINE TO COVER PII

**GENERAL E-LEARNING COURSES TO BE COMPLETED**

Note that some of these courses overlap category I and II GMTs. Do the GMT versions instead.
